

William de Try

Game Programming & Graphics Student

About

Game programming student at Stockholm University with a strong interest in graphics programming, engine architecture and rendering systems. Through personal projects I focus on understanding how game engines and rendering pipelines work at a low level using C++.

Location

Stockholm, Sweden

Focus

Game Programming
Graphics Programming
Engine Systems
Gameplay Programming

Languages

Swedish (Native)
English (Fluent)

Programming

C++
C#
Java

Technologies

SDL3
OpenGL
GLSL
Unity
SQL
Git
CMake

Concepts

Algorithms
Data Structures
Object Oriented Design
Rendering Pipelines

PROFILE

Game programming student at Stockholm University with a strong interest in graphics programming and engine development.

Experienced in C++, C#, Java and Unity. Personal projects focus on understanding engine architecture, rendering pipelines and low-level graphics systems.

EDUCATION

2024–
Present

B.Sc. Game Development

STOCKHOLM UNIVERSITY · Stockholm

Bachelor's program focused on game programming and computer science.

Relevant coursework includes Programming 1 & 2, Object-Oriented Analysis and Design, 3D Rendering, Mobile Application Development, C++ Programming, SQL, Algorithms and Data Structures.

PROJECTS

2026

Present

– Side By Tide – Local Co-op Adventure

UNREAL ENGINE 5, C++, BLUEPRINTS · University Team Project

Gameplay programmer on a two-player couch co-op pirate adventure built in Unreal Engine 5 during the SPM course at Stockholm University.

Built the shared C++ interaction layer (Interactable / Activatable interfaces), a crafting framework with ordered requirements, pattern puzzle controllers, co-op physics (raft towing, moving platforms, elevator) and a camera cutscene system. Also handled Git workflow and merge integration for the team.

2026

Present

– Learning DirectX 12 – Ongoing Devlog

DIRECTX 12, C++ · Personal Project

Public learning series working through Frank D. Luna's *Introduction to 3D Game Programming with DirectX 12*.

Each part distils one chapter into reusable notes – math foundations so far, plus the COM model, swap chains, depth buffering, descriptors, DXGI, residency and CPU/GPU synchronisation.

Feb 2026

CPlusEngine – Custom C++ Game Engine

C++, SDL3, CMAKE · University / Personal Project

Small cross-platform 2D engine with a clean split between reusable engine code and a Breakout game built on top of it.

SDL3 rendering, scene management, sprite and text rendering, audio and a predictable update loop – small enough to read, big enough to actually ship a game on.

Nov 2025

CPU Graphics Pipeline – Software Rasterizer

C++ · Personal Project

From-scratch CPU rasterizer in C++ with triangle setup, back-face culling, depth buffering, barycentric interpolation, framebuffer output and OBJ model loading.

Paired with a five-part technical devlog explaining how each piece of the pipeline works.

Oct 2025

Modern OpenGL Systems

C++, OPENGL, GLSL · Personal Project

Six-part series catching up on modern OpenGL – shaders, lighting, materials, camera systems, model loading and the practical shape of a small renderer.

2025

Prizm Puzzle Adventure – Shipped Mobile Game

UNITY, C#, IOS, ANDROID · University Team Project

Lead programmer on a Unity puzzle game published to the App Store and Google Play.

Built light-beam reflection and colour-mixing mechanics, custom Unity editor tooling for level design and handled the full submission process across both stores.

TECHNICAL SKILLS

Programming Languages: C++, C#, Java

Graphics / Engine: SDL3, OpenGL, GLSL, Rendering Pipelines

Tools: Unity, Git, CMake

Computer Science: Algorithms, Data Structures, Object Oriented Programming, SQL

WORK EXPERIENCE

2024–
Present

Store Associate (Part-time)

SNABBGROSS · Stockholm 📍

Customer service, inventory management and daily store operations while studying.

2022

Social Entrepreneur

ROOKIE STARTUPS · Stockholm 📍

Worked in a team developing a startup concept addressing a local social issue.

ACHIEVEMENTS

2023 — Academic diploma for strong academic performance at Upplands-Bro Gymnasium

2022 — Rookie Startups — Team of the Year
